

1. DimPlayer

Description: Contains descriptive information about each player such as PlayerName, Position, Nationality, and Age. Used for analyzing individual player performance and comparing players across roles or nationalities.

Hierarchy: Player → Position

2. DimTeam

Description: Stores team-related information such as TeamName, HomeTeam, AwayTeam, and HomeStadium. Supports team-based performance analysis across the season.

Hierarchy: Team → HomeStadium

3. DimMatch

Description: Describes match-level context such as MatchID, HomeTeam, AwayTeam, and Referee. Helps analyze match-specific performance and seasonal patterns.

Hierarchy: None

4. DimDate

Description: Provides full date attributes (Day, Month, Quarter, Year). Supports time-series analysis such as monthly goals, seasonal trends, and performance over time.

Hierarchy: Year → Quarter → Month → Day

5. DimStadium

Description: Includes stadium details such as StadiumName, City, Capacity, and HomeTeam. Supports home/away analysis and venue-based performance insights.

Hierarchy: Stadium → City

6. FactPlayerPerformance

Description: Central fact table containing one row per player per match. Holds all performance metrics including Goals, Assists, MinutesPlayed, Shots, and ShotsOnTarget. Links to all dimensions using foreign keys.

Measures & Equations

- Goals $\rightarrow$ SUM(Goals)
- Assists $\rightarrow$ SUM(Assists)
- MinutesPlayed $\rightarrow$ SUM(MinutesPlayed)
- Shots $\rightarrow$ SUM(Shots)
- ShotsOnTarget $\rightarrow$ SUM(ShotsOnTarget)

Equations:

- Player Efficiency = $\text{ShotsOnTarget} / \text{Shots}$
- Total Goals per Player = SUM(Goals)
- Performance Score = $(\text{Goals} * 4) + (\text{Assists} * 3) + \text{ShotsOnTarget}$
